Re: docket #99P-0485

Dear Dr. Henney:

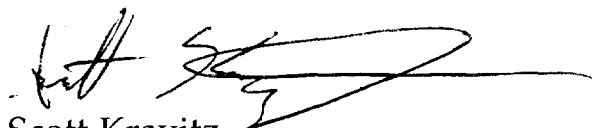

I am writing to express my concern over the increasing use of human antibiotics in livestock feed.

It is clear that, over time, all antibiotics must lose their potency to strains of organisms that develop resistance. Keeping this in mind, we need to be more sparing with our use of antibiotics in curing ailments. To waste them on livestock is to hasten the day when our most reliable cures are no longer viable.

I suggest that if the requirements regarding sanitary conditions within the farms were improved, such a growing reliance on livestock feed supplements might become unnecessary.

Please stem this practice which benefits only the factory farm and endangers all the rest of us.

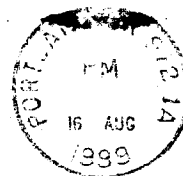

Sincerely,

Scott Kravitz
